Berkshire Inn,

Ocean end Virginia Ave. The opening season \$8 to \$15 weekly. Capacity 200. Elevator, bath, etc. J. O. & J. E. DICKINSON.
J6-17-17-4

AMERICAN BREEDERS MEET

ANNUAL CONVENTION OF ASSOCIATION HERE THIS WEEK.

Opening Session Tomorrow Morning.
Features of Program—Men Engaged in the Work.

The annual convention of the American Breeders' Association is to be held in this city this week. The opening session will be held at the "National Rifles" Armory tomorrow morning, beginning at 10 o'clock. The program calls for an afternoon and an evening session tomorrow, three sessions Wednesday and three Thursday.

The convention, it is claimed, will be unique, in that the members "are wonderful workers, producers of results unheard of in any preceding age."

The secretary of the association has been in existence four years and has a membership of 1,100. A large attendance of scientific and practical breeders from all parts of the United States, as well as from Canada, is expected. The men convene to report results of their work, to compare notes, to methods, and to give to the public a knowledge of the work they are doing. The papers and speeches will be popular in form, and several will be illustrated with stereophonic views.

The meeting is to be the first of the association in this city, and it is said scientists of the Department of Agriculture will attend the sessions. Secretary Wilson, who is president of the association, will open the convention with an address.

The secretary of the association is Willet M. Hays, assistant secretary of agriculture. He was the prime mover in its organization, before he came to Washington.

Covers a Wide Range.

The work of breeders today, it is explained, covers an extremely wide range. They are working to improve living things in all classes from the great draft horse to the tiny bacterium that weighs less than one-quadrillionth of an ounce. They are working not only on domestic animals and cultivated plants, but drawing on nature for wild species. In many lines work has only begun; in some but little progress has been made; while in others great success has been achieved.

The animal breeders are not only breeding for the show ring; they are trying to breed horses that will carry more weight, cows that will yield more milk and butter, meat animals that will yield steaks and chops that will grow fatter and flourish. The plant breeders are working for wheat that will yield finer flour and more of it, corn that will contain more starch, and so forth. They are blight and laugh at the attacks of rust and smut, cereals that will flourish in spite of drought, fruits that will grow in summer, and trees that will bloom all summer.

Among the members of the association is Prof. J. G. Thompson of the Department of Agriculture, who is engaged in teaching southern farmers how to "diversify" and northern farmers how to "specialize," going about the new breed of American race horses, the Mendel law of hybrids in the United States.

Dr. H. J. Webber of Cornell University will attend the convention and report on cotton breeding. His greatest works have been the hybridizing of citrus fruits and the improvement of New Jersey apples.

Lizard Burbank a Member.

Lizard Burbank, who appears to deal with apples as if they were the pieces on a chessboard, is also a member of the association.

The Breeders' Association is not content with improving the plants and lower animals. It has a committee on eugenics, which deals with problems relating to the improvement of man. David Starr Jordan, president of Leland Stanford University, is expected that one of the features of the convention will be a lecture by Jos. J. Gould, former head of the American National Bank, who said to be doing all in his power to save the small remnant of the buffalo. It is expected the lecture will be illustrated by views showing the effects of his work and experiences in the west.

Gifford Pinchot of the forest service is to report on "Breeding Forest and Nut Trees." Dr. Webster was identified, will report on "Breeding Tobacco." The secretaries of the various state and national breeding associations will be on hand to tell how the modern dairy cow has been produced. Dr. George M. Ronald, "Breeders' Association," will report on "The Breeding of Fur Animals" will be presented by Vernon Bailey. The "Breeding of Race Horses" will be reported on by C. W. Ward of Queens, N. Y., and the association will hold a joint session with the American Carnal Association. Prof. W. E. Castle of Harvard University will tell about "Color Variation in Domestic Animals." Illustrations of New Jersey apples, best known as a cartoonist, will report on the "Breeding of Arabian Horses," a subject in which he takes a lively interest.
